

Dr.Maria Montessori

**Namma Veedu Montessori house of children
[Montessori integrated Uni5 system of early child education]**

Age group - 5 months to years

Mission of our house of children.

The school follows Dr.Maria Montessori's [Italy's first woman doctor, 1870 - 1952] medical devised early child education system which is being considered to be the best early educational system in globe. The system is being implemented with Uni5 education pattern of learning. This system has been designed by Maharishi Kabila [10.B.C] and taken to the west.

Dr.Montessori lived and worked in India [Chennai - 1939-1949] Gandhiji welcomed her to work in villages. Tajore, Dr.Radhakrishnan, Tat Birla, Rajaji and Dr.Arundel observed her system and welcomed her to train and establish her early child education in this nation. ***Our foundation's mission is making every citizen to make the child to get this system with proper reasonable fees structure in rural and suburban society setup.***

Dr.Montessori introduced her educational system in 1907 after her thorough study and medical research with special children. Her first center was established in Rome in 1907. Our centers are accepting various special children and working with them.

The centers are not baby care centers or play schools. They give the freedom, space, time and work for children from infancy age [0-3 years] till 6 years. Our centers are the 3rd and 4th infancy centers in our nation. After 6 the child can go to grade 1 in regular stream of schooling. The child can also leave by 4 years to LKG system.

We have attained special results by mingling 1-3 years with 3 -6 years old children. The awareness in body-mind-intellectual levels has been well improved. Babies from 7 months are taken into the centers.

Montessori system medically focuses upon the body and mind development of the child through experience learning. Special exercises based on day to day life activities [EPL [essential practical life activities]] are given to children to settle their bio-energy and skill their neural, motor skills. These

activities make the child to shift into higher level of concentration and awareness. They become self-dependent.

Medically designed sensorial materials are given to initiate the sense organs, nerves, joints and various major parts of human body.

0-6 years is the age of imagination, sensual learning and language development is the most fast and important development which occurs. So the centers give much importance to spoken skills in mother tongue and other languages.

0-6 years is the sensitive period for personality development and seeding the units of various concepts through experience.

Specials devices for making the child to handle writing objects in future will be given. The system never asks the child to repeat anything without enough practice and experience. Proper monthly syllabus has been designed. This will be handed over at the end of each month. We never stress the child with testing and grading.

Nature walking [to attain basic science concepts, social skills and civics sense], Mathematics through sensual exploration [especially geometry], various language activities are given.

Uni5 system makes the child to unite the body, mind and intelligence. Awareness is being created in all these 3 levels and the child shifts to the consciousness level of thinking. It is to have the wholistic look of all ideas, concepts with the self. [BMIAC - body, mind, intelligence, awareness and consciousness]

Every concept is being introduced with sensual exploration and self-motivation. The system gives enough time and space for the child to explore around a concept in most practical way. We provide the real models to learn.

The child is being exposed to all cultural and heritage values of the nation which is a very important unit of Montessori education. We makes the child to respect all without discrimination and serve through work.

Language skills, social skills and basic concepts are the 3 major aims of the system. The freedom to choose and work makes the child to self-construct his own inner order. The system never forces the child to know everything immediately. The system just allows the child to explore and get exposed to various units of learning. Nothing is taught with books.

The end term narrative report about the child will reflect child's human behavior which is the most important feature of education.

Self-confidence, self-motivation, self-exploration, relating the concepts with the self, independence are the most important results we can see within a child.

We have the centers in 5 more places of the state. Our centers are the research and training centers for parents and teachers for URC Paramedical College for their Montessori training.

We thank all our parents for having trust in this system and giving a good opportunity to your child to self-construct their early ages of life!
